

# **SecureED.**

*User manual*

## **Abstract**

SecureED. is a webapp that simulates a university registration system. It is an updated version of SecureED. v. 1.0 (<https://github.com/onniegit/SecureEd-1.0>). It is intended to show several common software vulnerabilities in an educational setting, and to demonstrate the correct way to address these vulnerabilities. The software also resets itself to its initial settings following a session, allowing users to try various things without worrying about destroying their installation.

This document contains the manual of how to use SecureED. The rest of the document is ordered as follows: Chapter 1 describes the system requirements. Chapter 2 contains an explanation of how to start the program. Chapter 3 describes how to utilize asymmetric encryption. Chapter 4 includes instructions for Professors to enter grades. Chapter 5 includes instructions for Students to search for and enroll in courses. Chapter 6 includes instructions for Admins to add, search and edit non-admin user accounts. Chapter 7 provides user credentials.

This document describes functionality of SecureED. v. 2.0, dated 25 April 2022.

# **1 REQUIREMENTS**

## **1.1 SYSTEM REQUIREMENTS**

SecureED. is written in HTML, CSS, Javascript, and PHP, and was built and tested on Google Chrome v100 – thus, Chrome is the recommended browser. Otherwise, all libraries are included in the installation folder. Screen resolutions above 1920x1080, and aspect ratios greater than 16:9, are untested, and thus unsupported.

Required operating system: Windows 10.

Other versions of Windows are untested, and are therefore unsupported.

## 2 GETTING STARTED

### 2.1 INSTALLATION

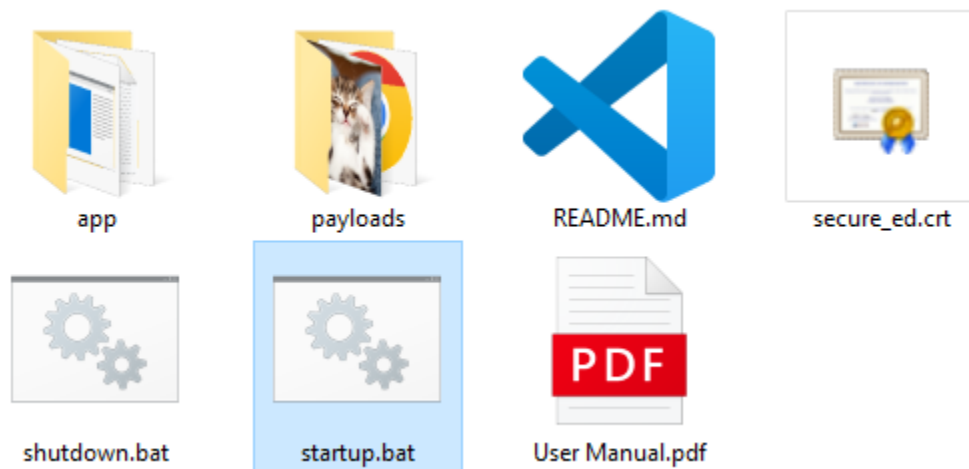

Unzip the file to the folder of your choice. All of the necessary libraries and certificates are included – no setup is required.

### 2.2 START-UP

SecureED. is portable, thus self-contained. To start the webserver, please do the following:

1. Navigate to the root folder of your installation.
2. Execute startup.bat, located in the SecureEd-master folder.

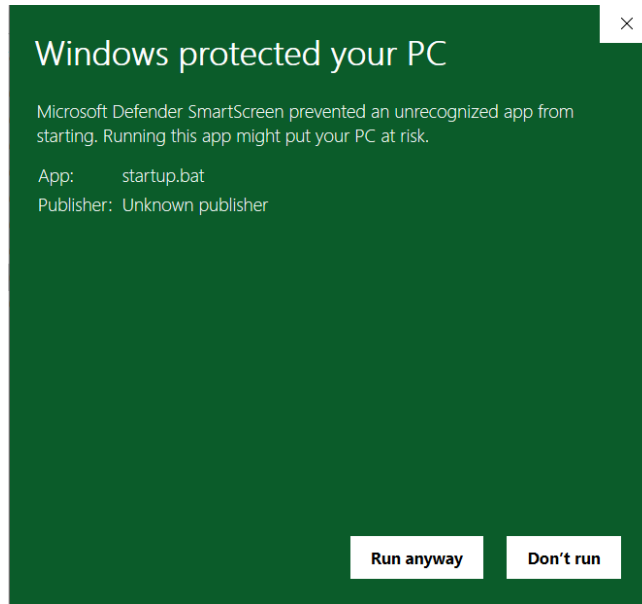

Figure 2.1 Startup

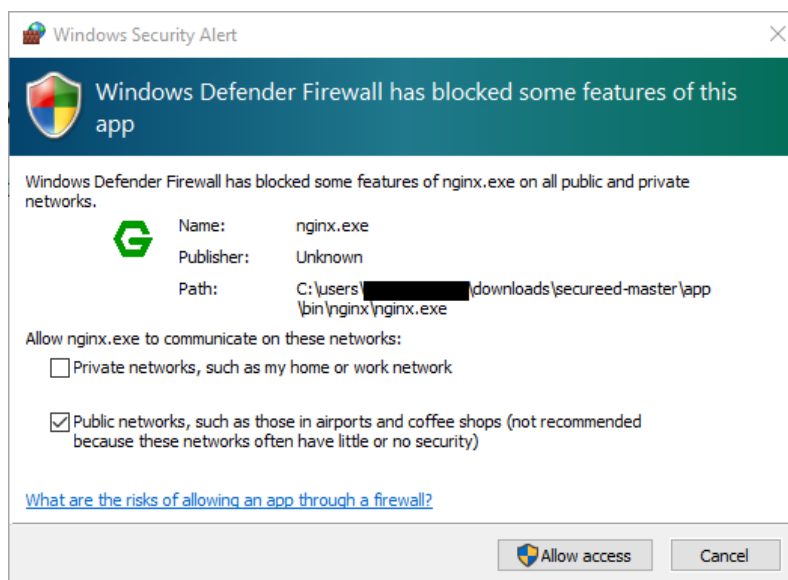

The first time you run startup.bat, Windows Defender (or other antivirus software) may warn you that the app is unrecognized and may put your PC at risk. To proceed, click 'Run anyway'.

Figure 2.2 Windows Defender Run anyway

You may also get a warning for the program that runs the web server (nginx). To continue, click 'Allow access'.

Figure 2.3 Nginx security alert

Your default browser will be opened, and you will be presented with a login screen (or a security warning). Note that a command prompt and an executable will open in the background – **DO NOT CLOSE THESE** until you want to end your session! After shutting down the server, your session will be terminated, and all data will be reset to their default values when the application is restarted.

Figure 2.3 Prompt to shut down the server

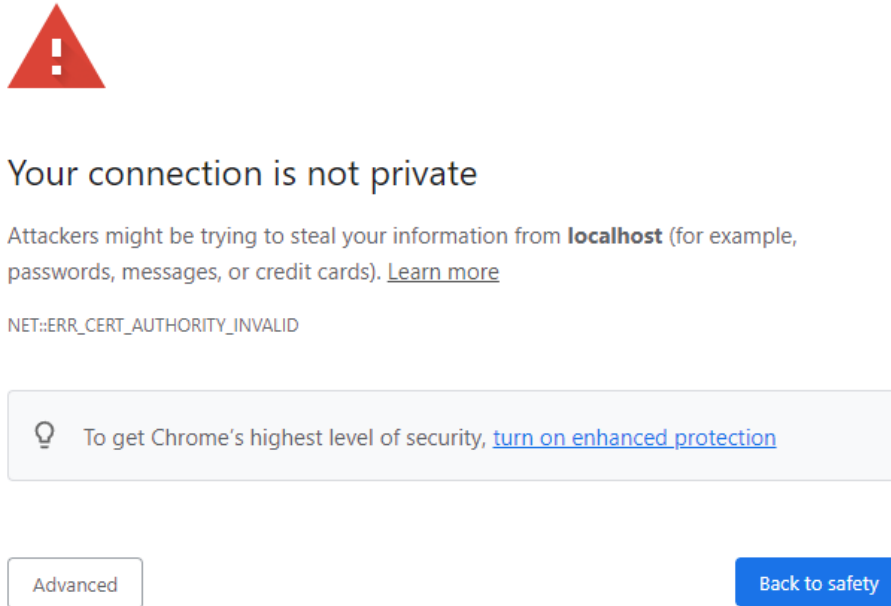

Figure 2.4 Common Gateway Interface executable

When the page opens your browser may display a page similar to this:

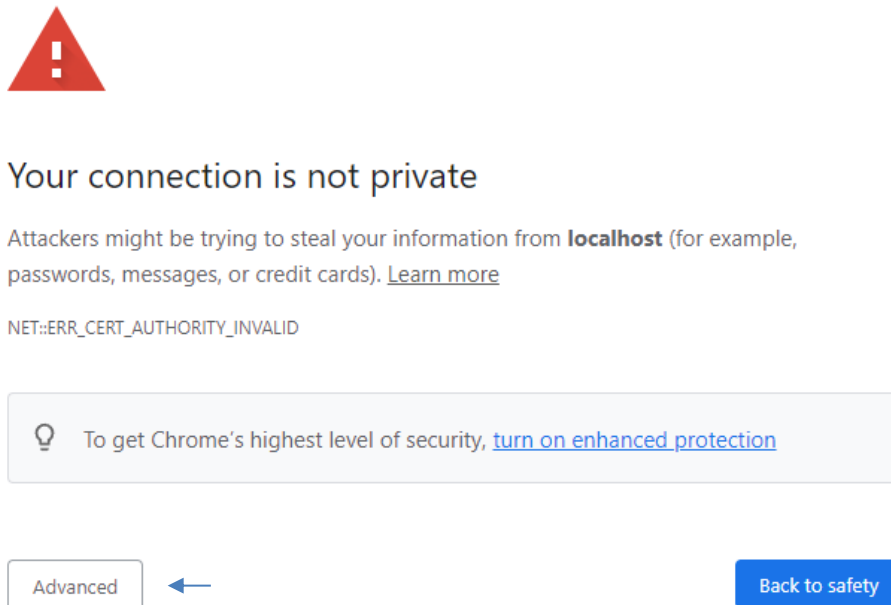

Figure 2.5 Browser security warning

In order to resolve this, you may either:

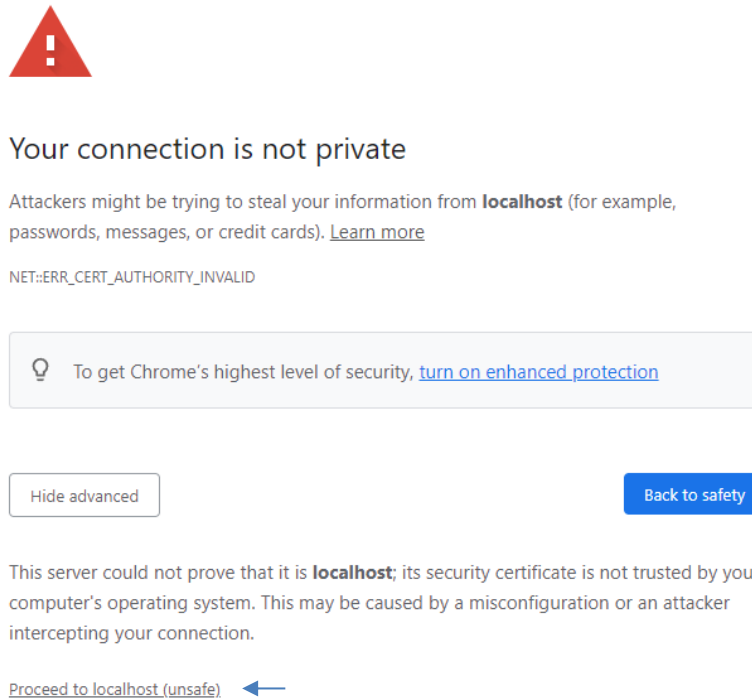

- (1) Import SecureED's certificate in your root store (see section 3.1)
- (2) Or you may ignore this warning by selecting 'Advanced':

Figure 2.6 Selecting 'Advanced'

And selecting ‘Proceed to localhost (unsafe)’:

Figure 2.7 Selecting ‘Proceed to localhost (unsafe)’

If you have followed the instructions from section 3.1, your browser should have opened the Log In page, and the address bar should look like this:

Figure 2.8 Address bar with trusted certificate

Otherwise, your browser will continue to warn you that the site is “not secure”:

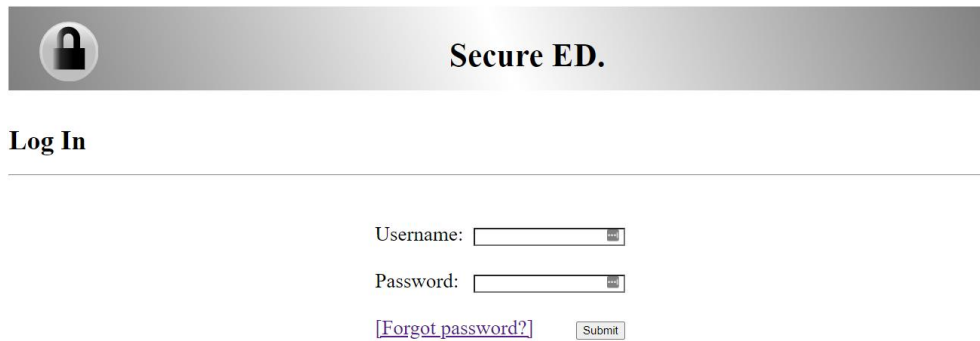

Figure 2.9 Address bar with an untrusted certificate

## 2.3 LOG IN

Enter a username and password into the spaces provided, and then press ‘Submit’ (See chapter 7 for login credentials).

Figure 2.10 Login Form

The login form is titled "Secure ED." and features a padlock icon. Below the title is a "Log In" section. The form includes two input fields: "Username:" and "Password:". Below the "Password:" field is a link labeled "[Forgot password?]" and a "Submit" button.

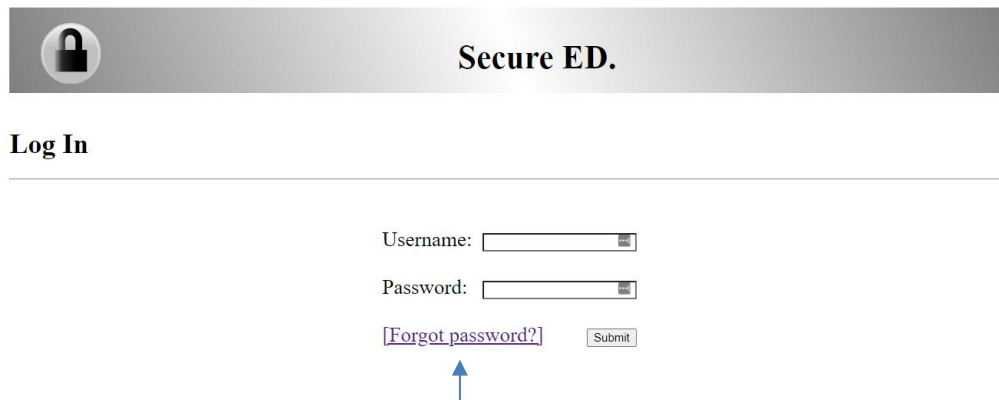

*Note: If you have forgotten your credentials, please select 'Forgot password?'. See the next section for information regarding how to recover your password.*

## 2.4 FORGOT PASSWORD

In order to recover a lost password:

1. Click 'Forgot Password?' on the Log In page.

Figure 2.11 Link to Forgot Password on Log In page

The login form is titled "Secure ED." and features a padlock icon. Below the title is a "Log In" section. The form includes two input fields: "Username:" and "Password:". Below the "Password:" field is a link labeled "[Forgot password?]" and a "Submit" button. A blue arrow points to the "[Forgot password?]" link.

2. On the next page, please enter your email in the provided field, and select 'Submit'.

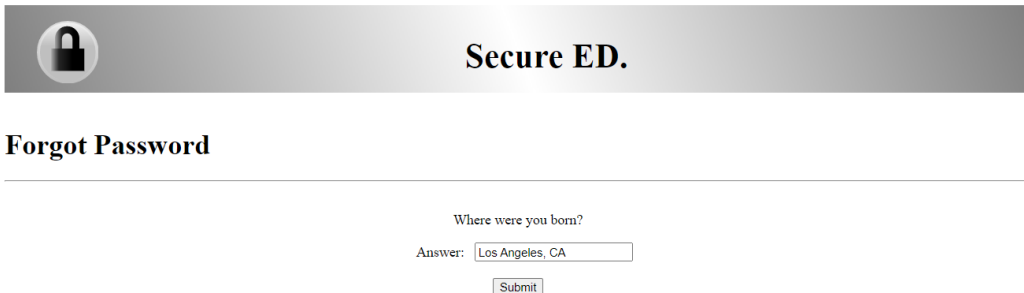

Figure 2.12 Forgot Password page

The screenshot shows the 'Forgot Password' page of the Secure ED system. At the top, there is a header bar with a padlock icon and the text 'Secure ED.'. Below the header, the title 'Forgot Password' is displayed. The main content area contains a form with the prompt 'Please enter your email:' followed by an 'Email:' label and a text input field containing 'student@email.com'. A 'Submit' button is located below the input field.

3. You will then be asked the security question associated with that account.

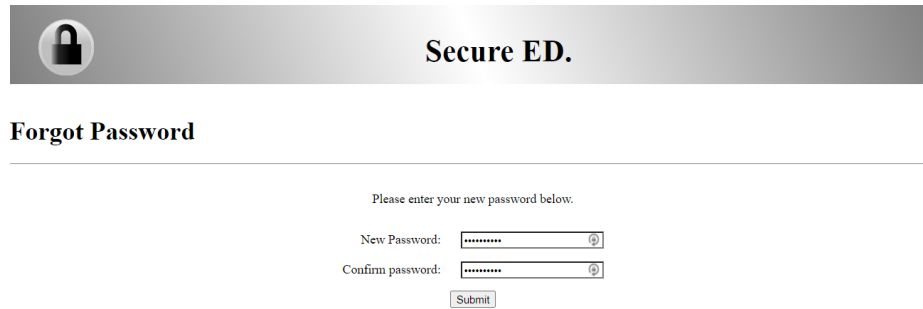

Figure 2.13 Forgot Password security question

The screenshot shows the 'Forgot Password' page of the Secure ED system, specifically the security question step. The header bar at the top features a padlock icon and the text 'Secure ED.'. Below the header, the title 'Forgot Password' is displayed. The main content area contains a form with the prompt 'Where were you born?' followed by an 'Answer:' label and a text input field containing 'Los Angeles, CA'. A 'Submit' button is located below the input field.

4. Enter the correct answer, and you will be taken to a page that will allow you to change your password. Your new password must be between 8 and 20 characters and contain at least one capital letter, one lowercase letter, one number, and one of the following special symbols: ! @ # \$ % ^ & \*

Figure 2.14 Forgot Password password change

The image shows a web form for changing a password. At the top, there is a grey header bar with a lock icon on the left and the text "Secure ED." in the center. Below the header, the title "Forgot Password" is displayed. The main content area contains the instruction "Please enter your new password below." followed by two input fields: "New Password:" and "Confirm password:". Both fields are masked with dots and have a small circular icon on the right. A "Submit" button is located below the "Confirm password:" field.

Secure ED.

### Forgot Password

Please enter your new password below.

New Password:

Confirm password:

*Note: Be sure that the contents of the New Password and the Confirm Password fields match!*

## 2.5 LOG OUT

After you have successfully logged in, you may log out at any time. To do so, click on the 'Log Out' button on the top pane of any page.

Figure 2.15 Logout

## 2.6 CLOSING THE PROGRAM

When you are ready to end your session, exit your browser and shut down the web server by entering 'Y' in the command prompt or running shutdown.bat (found in the same folder as startup.bat). The program will reset itself to its default values the next time you run startup.

Figure 2.16 Prompt to shut down the server

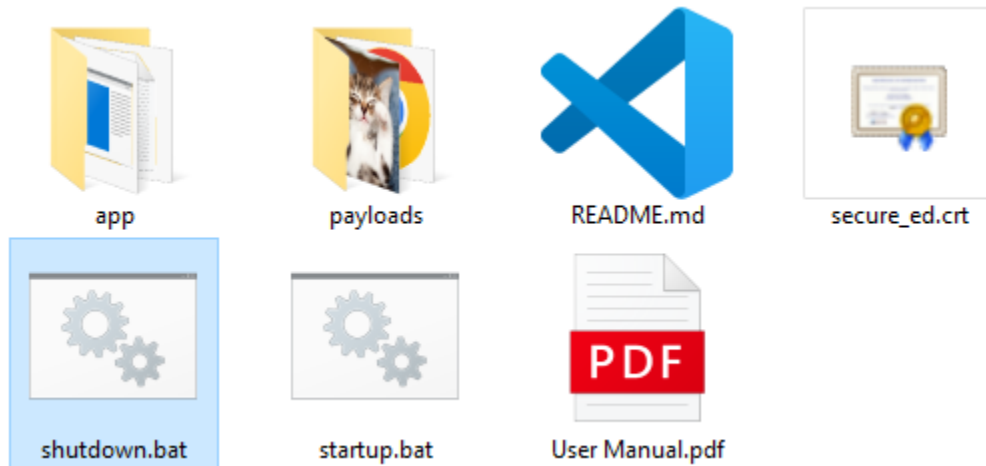

Figure 2.17 Shutdown

*Note: If you shut down the web server from the command prompt, the executable php-cgi.exe will continue to run, and can now be closed manually.*

## 3 ASYMMETRIC ENCRYPTION

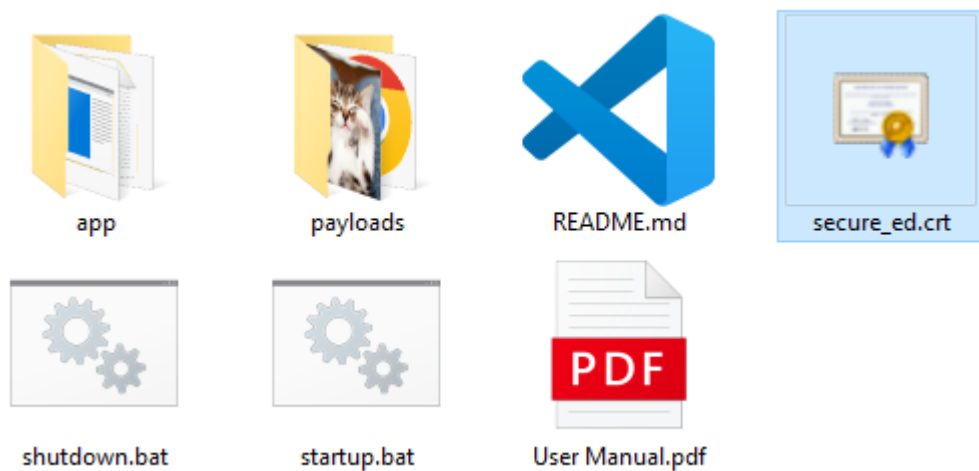

### 3.1 IMPORTING THE CERTIFICATE

SecureED. utilizes asymmetric encryption (also known as public-key cryptography) to secure network traffic between the client and the server. SecureED. provides both the private key and the public key (also known as a certificate) to do this.

By default, your operating system will not trust SecureED's certificate, and it must be imported into your Trusted Root Certification Authorities store. To import the certificate, please do the following:

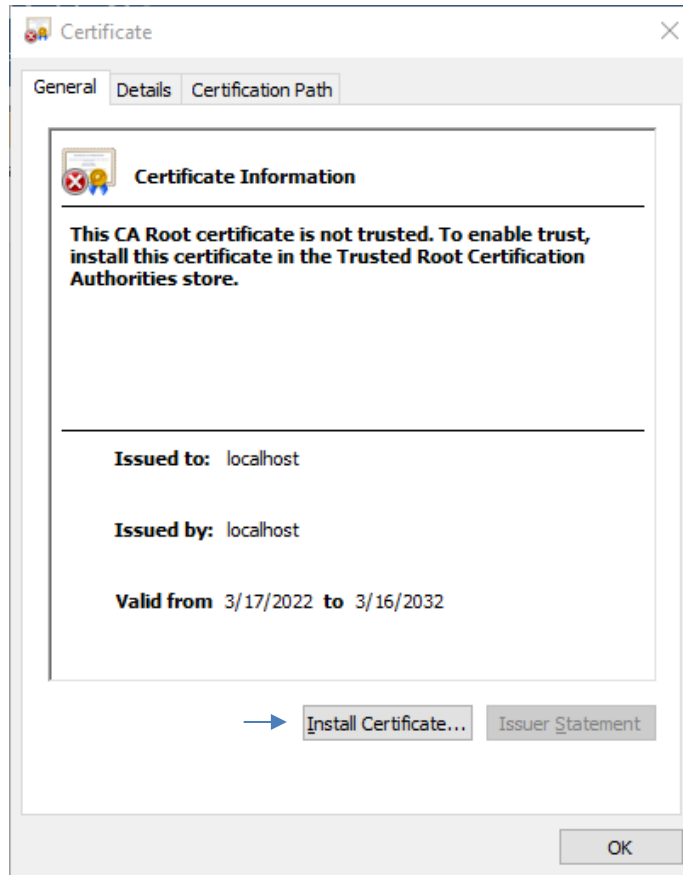

1. Double-click the certificate, located in the SecureEd-master folder.

Figure 3.1 SecureED. Certificate

2. Select 'Install Certificate...'

Figure 3.2 Selecting Install Certificate

3. Follow the instructions in the Certificate Import Wizard
  - a. Select 'Current user'. Click next.
  - b. Select 'Place all certificates in the following store'. Click 'Browse'.
  - c. Select 'Trusted Root Certification Authorities'. Click 'OK'. Click 'Next'.
  - d. Click 'Finish'.
  - e. If you are prompted with a security warning, click 'yes'.
  - f. Click 'yes'.

If you were directed to this section from section 2.2, please restart your browser (In Chrome, do this by typing "chrome://restart" in the address bar). Alternatively, shut down the server (see section 2.6) and restart the application (see section 2.2).

*Note: After 3/16/2032, SecureED's certificate will have expired and your browser will now warn you that the site is "not secure" because of an invalid certificate!*

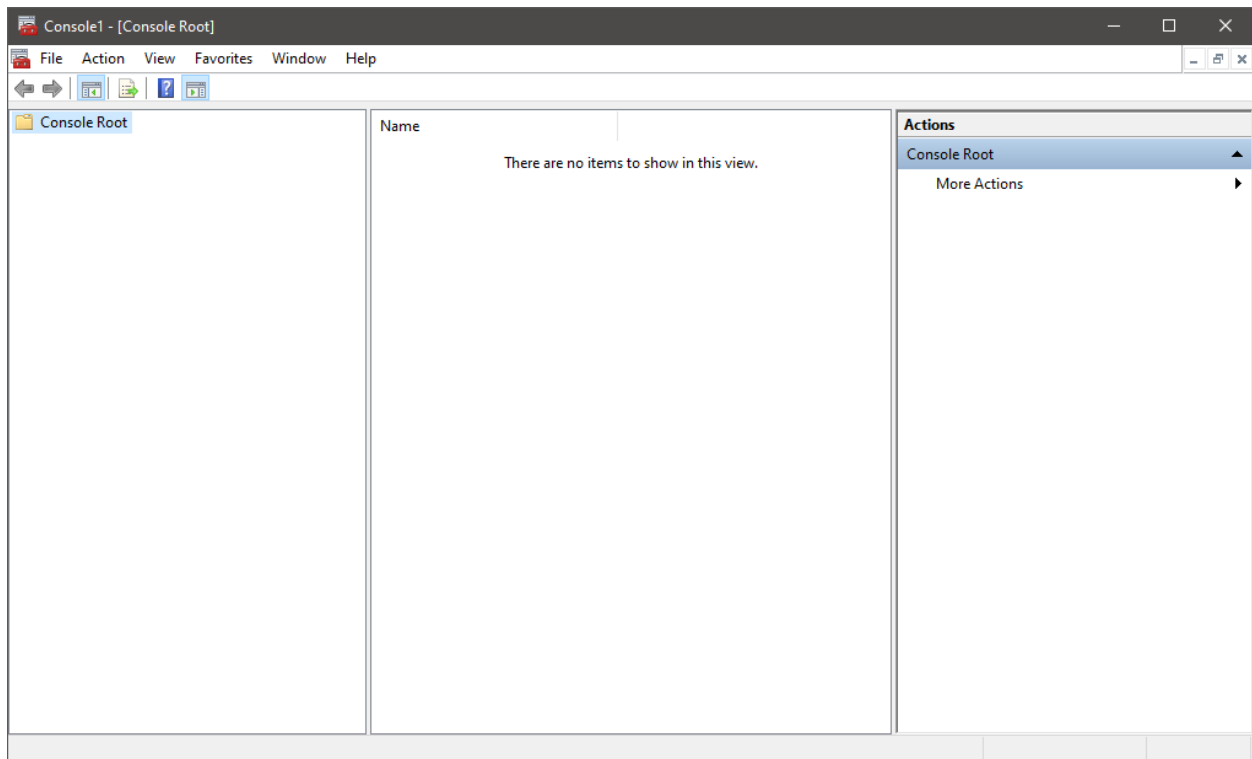

## 3.2 DELETING THE CERTIFICATE

When you are done using SecureED, you may want to delete its certificate from your operating system. To delete the certificate:

1. Press Windows key + R to open the run command.
2. Type 'mmc'
3. Hit enter and run the program 'Microsoft Management Console'

You should see a program that looks like this:

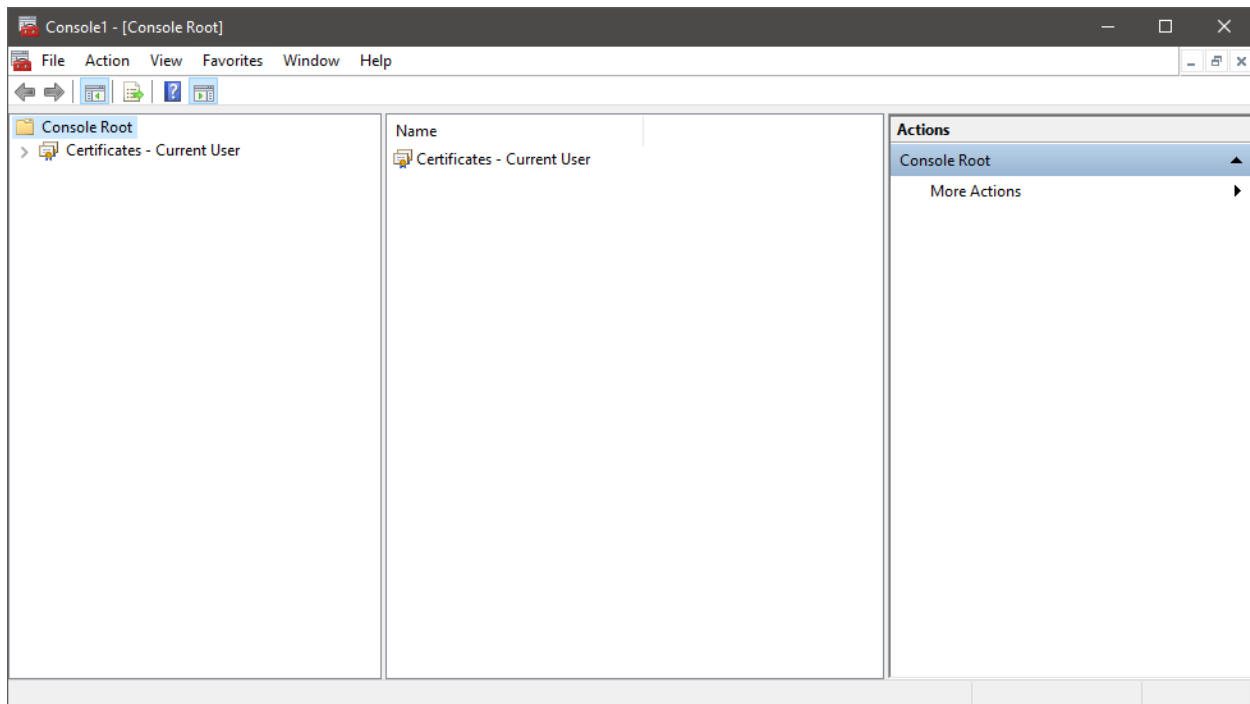

Figure 3.3 Microsoft Management Console

4. In the console, click 'File', then 'Add/Remove Snap-in...'.
5. In the 'Available snap-ins', select 'certificates'.
6. Click 'Add'.
7. Select 'My user account'. (If you imported SecureED's certificate under 'local machine', select 'computer account' instead).
8. Click 'Finish'.
9. Click 'OK'.

The console should now look like this:

Figure 3.4 Certificates added to the console

10. Double-click 'Certificates – Current User' (or 'Certificates (Local Computer)').
11. Double-click 'Trusted Root Certification Authorities'.
12. Double-click 'Certificates'.
13. Find SecureED's certificate.

It should look like this:

Figure 3.5 SecureED's certificate

localhost	localhost	3/16/2032	<All>	<None>
-----------	-----------	-----------	-------	--------

14. Right-click and delete SecureED's certificate.
15. Click 'yes'.
16. Click 'ok'.

**DO NOT DELETE OTHER SYSTEM CERTIFICATES.** These are other certificates that your operating system trusts.

SecureED's certificate can be identified by its Thumbprint (sha1):

1fd2df58f4563b5b5ba3b59a967bb37f23edef7d

If the certificate has this value as its thumbprint, then it is safe to delete.

*Note: After you delete the certificate, your browser will begin to warn you that the site is "not secure".*

### **3.3 CREATING YOUR OWN SELF-SIGNED CERTIFICATE**

When creating a website, you may want to create your own self-signed certificate. These types of certificates are useful in development environments and internal networks because they are easy to make and cost no money to create.

To create a self-signed certificate, you will need to use a program. Here, we will use a popular program for creating certificates called OpenSSL

OpenSSL can be downloaded here:

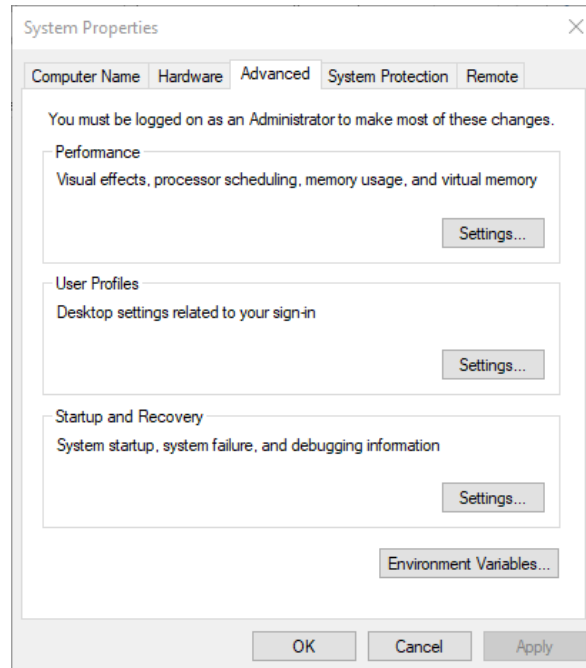

<https://slproweb.com/products/Win32OpenSSL.html>

Once OpenSSL is installed you will want to add it to the Windows environment variables.

1. Press Windows key + R to open the run command.
2. Type 'SystemPropertiesAdvanced'.

You should see the system properties dialog box

Figure 3.5 System Properties dialog box

3. Click 'Environment Variables...'.
4. Under 'System variables', double-click 'Path'.
5. Click 'New'.
6. Add the path to openssl.exe that you just installed.
7. Click 'OK' and close the control panel.

You should now have an installation of OpenSSL that you can use in cmd.

1. Press Windows key + R to open the run command
2. Type 'cmd'.
3. Hit enter to run the Windows Command Prompt.
4. Enter the command:

openssl version

To see if you have a valid installation of OpenSSL .

5. You can now use OpenSSL commands to create your own self-signed certificates.  
SecureED's self-signed certificate was created with the following commands:

```
openssl req -newkey rsa:2048 -nodes -keyout secure_ed.key -out secure_ed.csr
```

```
openssl x509 -signkey secure_ed.key -in secure_ed.csr -req -days 3652 -extfile v3.ext -out secure_ed.crt -days 3652
```

*Note: In order to run these example commands, the extension file v3.ext must exist in the current directory. This file is provided in the SecureEd-master folder.*

When you run the first command, you will be prompted to enter some information for your certificate request. You may enter information into these fields, or leave them blank by simply hitting enter.

### Figure 3.6 Entering information with OpenSSL

[illegible]

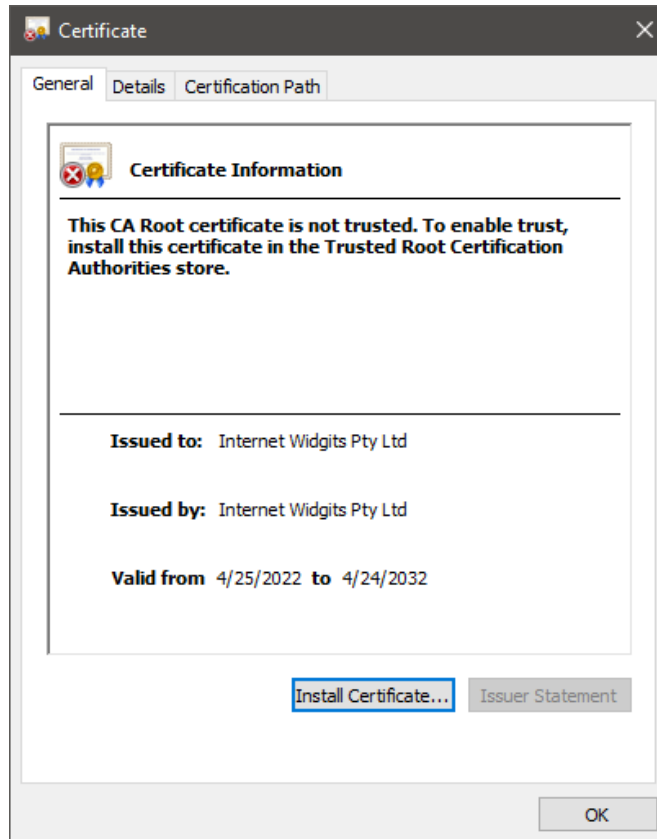

After running the second command, you should have generated three files:

- (1) The private key: `secure_ed.key`
- (2) The certificate signing request: `secure_ed.csr`
- (3) The public key (certificate): `secure_ed.crt`

And if you double-click the certificate, it should contain the information you generated it with. By default, it will have an organization name of Internet Widgits Pty Ltd and an expiration of ten years.

Figure 3.7 Newly generated certificate

## 4 FACULTY

### 4.1 DASHBOARD

Figure 4.1 Faculty Dashboard

## 4.2 ENTER GRADES

### 4.2.1 DESCRIPTION

The Enter Grades functionality allows a faculty member to add final grades to a course, using a .csv (comma-separated values) file.

### 4.2.2 CSV FORMAT

Uploaded files must be comma separated text values, in the following format:

```
USER_ID,GRADE
USER_ID,GRADE
USER_ID,GRADE
...
```

e.g.:

```
927066652,A
927190481,F
927201552,C
927237023,B
927369978,D
927410321,F
927512079,A
927535222,A
927565074,B
927600214,C
927620146,A
```

927671464,F  
927694539,C  
927790514,B

### 4.2.3 INSTRUCTIONS

1. From the Dashboard, select 'Enter Grades'.

Figure 4.2 Enter Grades selection

2. On the following page, enter the Course ID (CRN).

Figure 4.3 Enter Grades page

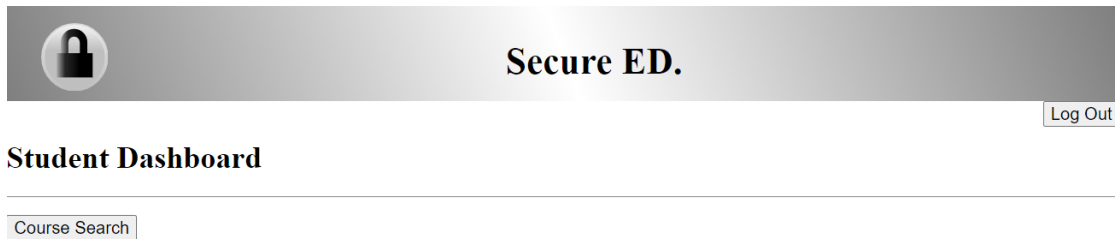

The screenshot shows the 'Secure ED.' header with a lock icon and 'Dashboard' and 'Log Out' buttons. Below the header is the 'Enter Grades' section. It contains a 'Course ID' input field with the value '12345'. Below this is a file upload area with a 'Browse...' button, the text 'No file selected.', and 'Submit' and 'Cancel' buttons.

3. Select "Browse".
4. Select a .csv file from your computer (see 3.2.2 for correct formatting).
5. Select submit to upload the file.

## 5 STUDENTS

### 5.1 DASHBOARD

Figure 5.1 Student Dashboard

The screenshot shows the top navigation bar with a lock icon and the text "Secure ED." on the right. Below the bar, on the right side, is a "Log Out" button. The main heading "Student Dashboard" is centered. Below it is a horizontal line, and then a "Course Search" button is positioned on the left.

### 5.2 COURSE SEARCH

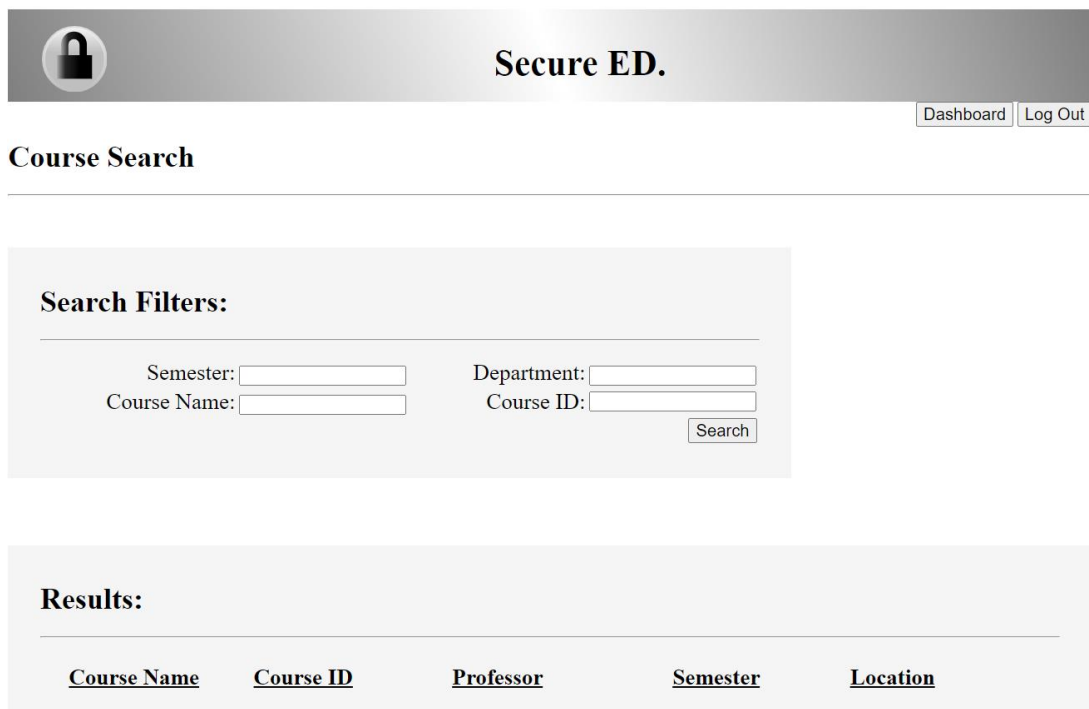

#### 5.2.1 DESCRIPTION

Course search allows students to find current, past and future courses.

#### 5.2.2 INSTRUCTIONS

1. From the Dashboard, select 'Course Search'.
2. On the following page, enter information relevant to the course you may be interested in.

Figure 5.2 Course Search page

The screenshot shows the top navigation bar with a lock icon and the text "Secure ED." on the right. Below the bar, on the right side, are "Dashboard" and "Log Out" buttons. The main heading "Course Search" is centered. Below it is a horizontal line. The "Search Filters:" section contains four input fields: "Semester:", "Department:", "Course Name:", and "Course ID:". A "Search" button is located to the right of the "Course ID:" field. Below the filters is a "Results:" section, which is followed by a horizontal line and a table with five columns: "Course Name", "Course ID", "Professor", "Semester", and "Location".

3. Select search.

CYBR 2200	A	gsinclair@email.com	8:31:AM - 9:46:AM	Building X	<input type="button" value="Enroll"/>

*Note: If you don't wish to enroll at this time, you can always select 'Dashboard' to return to your landing page without enrolling in a class!*

## 5.3 COURSE ENROLL

### 5.3.1 DESCRIPTION

After finding a course using Course Search, a student can enroll in a section of the course.

### 5.3.2 INSTRUCTIONS

1. Find a course per the instructions in 4.2.2.
2. Select "Enroll" to bring up a list of sections.
3. Select "Enroll" next to the section you wish to enroll in.

  - Answer (to Security Question)
4. Confirm the user's e-mail and password, and re-enter them in their respective confirmation fields.
5. Select 'Submit'.

## 6.3 USER SEARCH

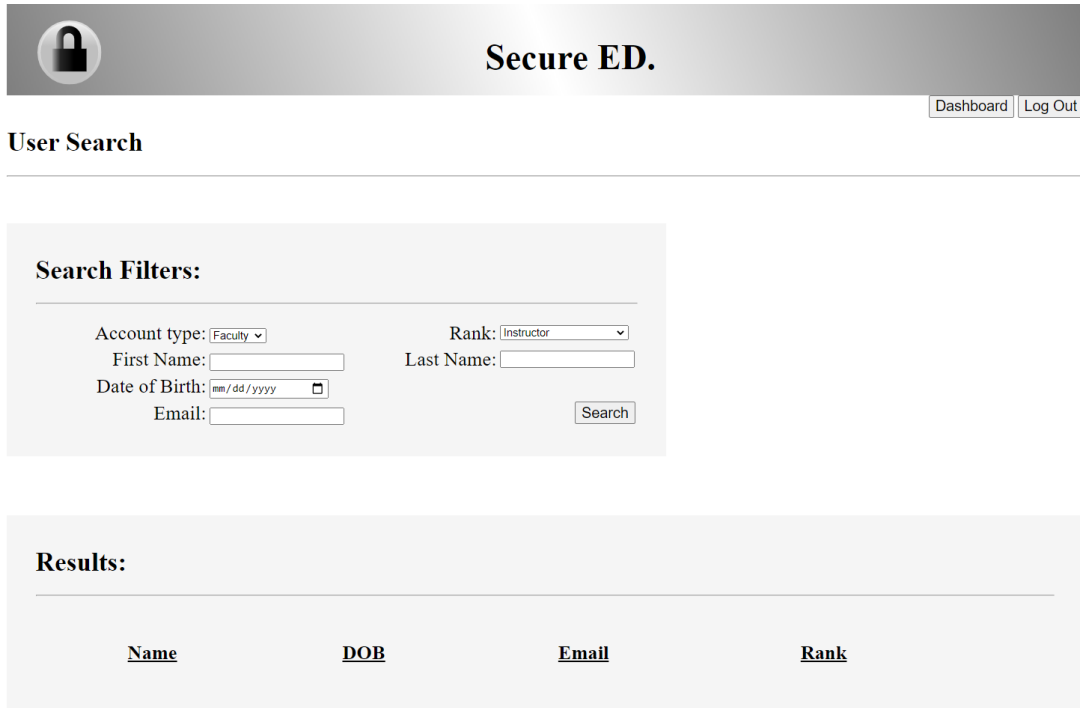

### 6.3.1 DESCRIPTION

Allows administrators to search for users using filters.

### 6.3.2 INSTRUCTIONS

1. From the Dashboard, select 'User Search'.
2. Select an account type, and a Rank (faculty) or Year (students).  
*Note: These two fields are mandatory!*

Figure 6.4 User Search page

The screenshot shows the 'User Search' page within the 'Secure ED.' system. At the top, there is a header bar with a lock icon and the text 'Secure ED.'. To the right of the header are links for 'Dashboard' and 'Log Out'. Below the header, the page title 'User Search' is displayed. The main content area is divided into two sections: 'Search Filters:' and 'Results:'. The 'Search Filters:' section contains several input fields: 'Account type:' with a dropdown menu set to 'Faculty', 'Rank:' with a dropdown menu set to 'Instructor', 'First Name:', 'Last Name:', 'Date of Birth:' with a date picker set to 'mm/dd/yyyy', and 'Email:'. A 'Search' button is located to the right of the 'Email' field. The 'Results:' section is currently empty, showing only the column headers: 'Name', 'DOB', 'Email', and 'Rank'.

<u>Name</u>	<u>DOB</u>	<u>Email</u>	<u>Rank</u>
